Gungahlin, ACT, 2912 | +61 403 138 910 | ausaf1996@gmail.com

SUMMARY

Principal AI Engineer with 5+ years of experience (3+ years in Australia) specializing in the full-lifecycle delivery of Agentic AI systems and cloud-native data products on AWS, with deep integration across Salesforce. Expertise in **Product Strategy, Agentic Architecture, and AI Governance** with a proven track record of **integrating AI into business processes** to drive measurable revenue growth.

EXPERIENCE

Principal AI Engineer | VentureCrowd | Australia

Jan 2023 – Present

Jan 2023: Data Scientist → Feb 2024: Senior Data Scientist → Oct 2025: Principal AI Engineer

Product Strategy & Revenue Growth

- Architected and launched a funds management platform — a multi-agent system utilizing **AWS Bedrock** for agentic infrastructure and **Salesforce** for CRM workflows. Context-aware agents synthesize current view, platform state, memory, and investor activity to recommend investors fund managers should prioritize for nurturing and conversion; a **new revenue stream** for VentureCrowd.
- Engineered a proprietary **Likelihood-to-Invest Engine** that scores investors on conversion probability using regression analysis on CRM data enriched with location, demographics, interests (property, equity), education, and career history; helped the sales team prioritize outreach and contributed to **>\$2M in investments**.
- Optimized the Founder onboarding funnel by architecting an **Agentic Data Enrichment layer** that autonomously ingests PDFs and scrapes relevant web sources to pre-populate venture profiles, cutting completion time from **4 hours to under 60 minutes**.

Technical Architecture & Agentic Systems

- Designed and deployed an **Agentic Email marketing system** with the marketing team using **CrewAI** — autonomously generates email variations, runs A/B tests on CTR and conversion, and iterates new variations from the top performers in an ongoing optimization loop, delivering a **15% increase in CTR** and saving **40+ hours weekly**.
- Built an **AWS↔Salesforce integration layer** that exposes AWS S3, Google Sheets, and marketing APIs as **Agentforce-callable tools** via AWS Lambda and Salesforce External Services; empowered Salesforce users to build their own agents pulling external data without engineering support, saving **10+ engineering hours weekly**; shipped new agent capabilities in days rather than sprints.
- Deployed **Data Analysis Chatbots** in Agentforce that let internal teams query datasets living inside and outside Salesforce in natural language; **minimized hallucinations** by using pre-verified SQL templates where the LLM fills only validated slots, returning structured execution traces (aggregation, field, filter) for auditability; reduced cross-team reporting requests by **70%**.
- Shipped a **Figma-to-LWC agent** that converts Figma designs into deployed Lightning Web Components: Slack frontend captures designer requests, AWS-hosted backend parses Figma JSON and uses an LLM to generate LWC code, then deploys via **Salesforce Metadata API** for live testing with **60% success rate**, saving **15+ developer hours weekly**.

Governance, LLMops & ROI Measurement

- Implemented **Bedrock Guardrails** across the funds management platform; enforced real-time safety policies — content filters, denied topics, prompt injection detection, and PII redaction — to ensure LLM outputs met **Australian financial regulatory standards**.
- Integrated **MLflow with CrewAI** to capture full reasoning traces across multi-agent workflows — prompts, tool calls, intermediate outputs, and final decisions — persisted in **Postgres and AWS S3**; established end-to-end auditability of agent decisions for internal audit and review.
- Designed and launched **ROI Dashboards in Tableau** for executive and leadership visibility; surfaced real-time KPIs including wholesale conversion rates, capital raised, projected close dates based on current pace, and **Time-Saved-to-Dollar** efficiency metrics.

Data Scientist | Magnit Global | India

Jan 2021 – Jan 2023

Executed end-to-end data science initiatives for a recruitment technology startup (acquired by Magnit Global).

- Created an autonomous chatbot to directly engage users and encourage resume submissions; **increased candidate applications by 25%** through automated top-of-funnel engagement.
- Developed custom **Named Entity Recognition (NER)** models to extract specialized skills from unstructured data; achieved **90% precision** in professional experience mapping for the core engine.
- Engineered a microservices architecture for a multi-directional matching system (Resume-to-Job, Job-to-Job, Resume-to-Resume) utilizing **Sentence-Transformers (SBERT)** and custom vector embeddings; **increased candidate discovery accuracy and relevance by 30%** compared to traditional keyword matching.
- Architected and deployed matching algorithms as production-ready **REST APIs documented with OpenAPI/Swagger**; managed the full containerization and deployment lifecycle on **AWS**.
- Led competitive analysis and performance benchmarking of 3rd-party AI models; delivered **"build-vs-buy" reports** to executive leadership that guided the long-term AI product roadmap.
- Designed and implemented **ETL pipelines in PostgreSQL** using scheduled materialized views; drastically reduced dashboard load times for monitoring **conversion funnels, Time-to-Hire, and source tracking**.

TECHNICAL SKILLS

AI & Systems Architecture: Multi-agent orchestration, LLM APIs (OpenAI, Anthropic), Agentic Frameworks (CrewAI), Guardrails (LlamaGuard, Bedrock Guardrails), RAG, LLMOps, MLflow, NLP, Deep Learning, Machine Learning

Cloud & Infrastructure: AWS (App Runner, DynamoDB, Cognito, CodeBuild, Bedrock, Fargate, Lambda, S3, API Gateway, ECS), Infrastructure as Code (IaC), CI/CD, Docker, GitOps, ETL Pipelines, Google Cloud Run, Google Artifact Registry, Vertex AI

Salesforce: Agentforce, External Services, Flows, Lightning Web Components (LWC), Metadata API, External Integrations with Salesforce, Apex

Data Engineering & Visualization: Python, SQL, PostgreSQL, microservices architecture, Automations, Tableau

EDUCATION

Master of Data Science		Deakin University		Melbourne	July 2019 – July 2021
Bachelor of Mechanical Engineering		Osmania University		India	June 2014 – June 2018
